

How do I show question if multiple answers were selected in a previous question?

Looking to set up logic based on the number of options selected in a checkbox question? For example, say you want to ask a follow up question of respondents who select more than one option. Using the answer count merge code you can store how many options were selected and then set up logic based on this value!

Learn how in our tutorial on [Setting Up Logic Based on Number of Checked Options](#).
