

Email Question Type

An Email question is a short-answer, open-text field with validation that ensures entries are email addresses.

When To Use It

Use Email questions to gather email addresses from your respondents.

What is your email address?

jane@email.com

Check it out in an [example survey!](#)

[Add a survey](#) with this question to your account!

Placeholder Text

Use the **Layout** tab to provide placeholder text for your Email question. Placeholder text can serve as guidance for your survey respondents, showing them the expected format of the answer.

Visit the [expanded documentation](#) for additional information.

HTML Placeholder

CSS Class Name

Placeholder text is displayed as follows within your question, and will be overridden by the respondent as they provide their answer.

6. What is your email address?

Survey Taking

On a desktop and most laptops the Email question type looks like so.

What is your email address?

When optimized for mobile devices the Email question type looks very similar.

By default, survey questions show one at a time on mobile devices to prevent the need for scrolling on smaller screens. You can turn off this [one-at-a-time interaction](#) if you wish.

The image shows a mobile survey interface. At the top, there is a teal header with the word "Survey" in white. Below the header, the question "What is your email address?" is displayed. A text input field with a yellow border contains the text "jane@email.com". At the bottom of the screen, there is a black navigation bar with a left arrow, a progress indicator showing "8%" completion, and a right arrow.

Reporting

In the Standard Report Email questions report as a [collapsed response list](#), by default.

<p>What is your email address?</p> <p>23 Total Responses Show Responses</p>	<ul style="list-style-type: none">Chart TypeFilterLayout & OptionsMoveDelete
