

# Image Select (select one) Question Type

---

The Image Select (select one) question type is a single-select question with clickable images as answer options.

## When To Use It

Use the Image Select (select one) question to ask your respondents to choose a single image from a list of images.

*If you are looking for steps to add an image to your question text, check out our [Add Image to Question Text Tutorial](#).*

## Setup

1. To set up a Image Select question, it's easiest to start by uploading the images you would like to use in our Image Select question to your **File Library**. See our [File Library Tutorial](#) to learn how!
2. Click the **Question** link on the page where you would like to add your Image Select question.
3. Select **Image Select (select one)** from the Question Type dropdown and enter the question you wish to ask.
4. Scroll to the **Multiple Choice Options** and click the image placeholder to begin adding your answer options.

## Layout Options

There are a number of options available via the **Layout** tab of the Image (select one) question.

- If you have a large number of images for the respondent to choose from, consider using the **Images Per Row** field to determine how many images are display per each row.
- If your images vary in size, you may force a specific **Width** or **Height** (in pixels) for your images. We do not recommend adjusting both values as this is likely to result in distorting the image.

## Best Practice Tip: Recommended Image Size

For Image Select questions we recommend image files of no larger than 200px x 200px.

When uploading images to the [File Library](#) you have the option to scale your image using pixel width or a percent. There are also various tools online to resize images e.g.

<http://www.picsize.com/>. It is important to note that resizing images may negatively affect the quality of the image.

The screenshot shows a form for uploading an image. The form includes fields for 'Image-1.jpg', 'Title', and 'Caption'. Below these is a 'Scale image to' dropdown menu. The dropdown is open, showing three options: '100', 'Percent (%)', and 'Pixel Width (px)'. The 'Percent (%)' option is selected and highlighted with a blue bar. A red box highlights the 'Scale image to' section.

## Survey Taking

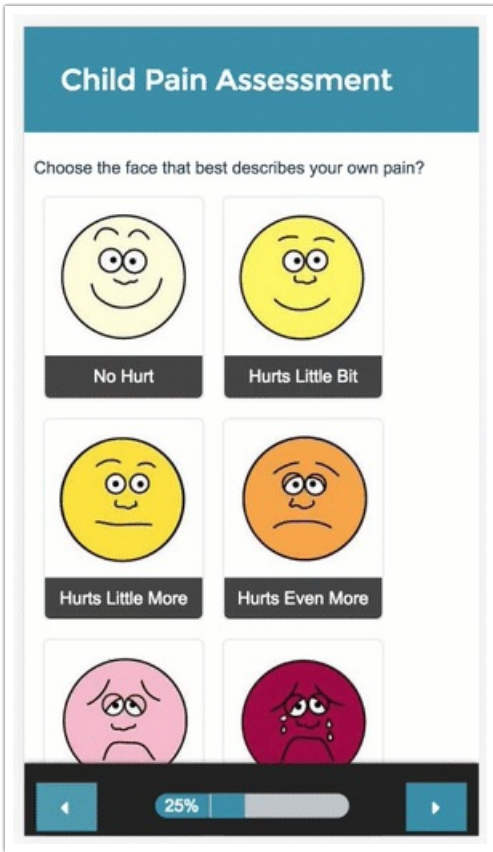

On a desktop and most laptops the Image Select question type looks like so.

The screenshot shows a survey question: "Choose the face that best describes your own pain?". Below the question are six options, each with a face icon and a label: "No Hurt" (smiling face), "Hurts Little Bit" (neutral face), "Hurts Little More" (neutral face), "Hurts Even More" (sad face with a green checkmark), "Hurts a Whole Lot" (sad face), and "Hurts the Worst" (crying face).

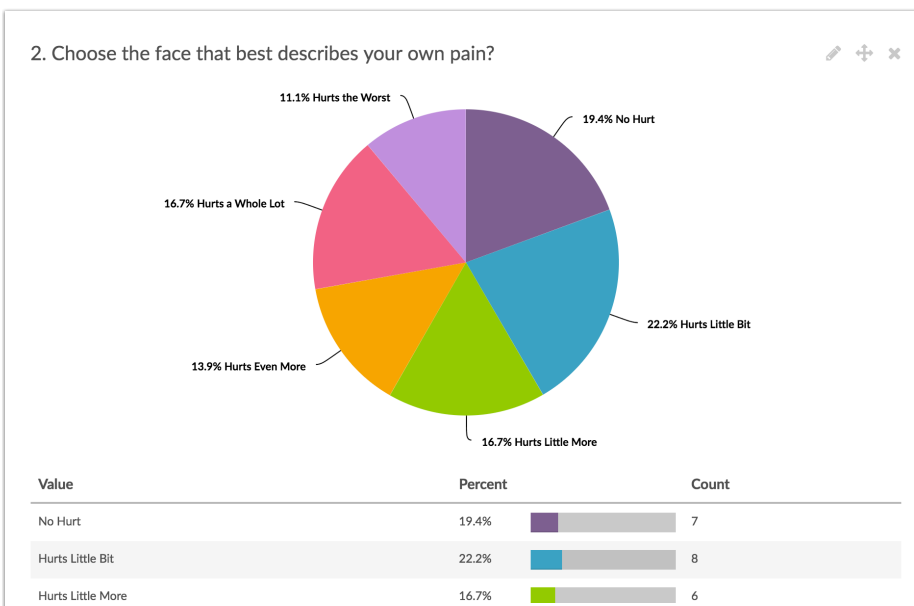

When optimized for mobile devices the Image Select question type looks very similar.

By default, survey questions show one at a time on mobile devices to prevent the need for scrolling on smaller screens. For single-select questions, like the select-one Image Select question, the screen will automatically advance after an option is selected. You can turn off this [one-at-a-time interaction](#) if you wish.

## Reporting

Single Image Select questions report as a pie chart with a table that includes a count and percent for each answer option. The reporting values rather than the images themselves are used within reporting.

- ⊕ See additional compatible chart types
- ⊕ See what other report types are compatible

## Exporting

The [CSV/Excel export](#) for a single Image Select question will have a single column of data. The reporting values rather than the images themselves are used in the export.
