Verify Two Textbox Entries Match

Verifying the entries in two textboxes match is a very common practice in surveys and web forms. It's a great method for ensuring the email address a survey respondent enters is correct and free of typos.

set this up:

1. Add textbox questions to the same page (this is only available for questions on the same page).

2. Edit your second question and go to the **Validation** tab.

3. Scroll to the **Advanced** section and select the question you would like to validate against in the dropdown that reads **Verify this question matches a previous question on this page** .

Change or translate the error message

If you wish to change the text of the error message and/or translate this message go to **Tools > Text & Translations** and click on your language. Scroll to the bottom of the **Messages** tab edit the **Verify Match Error** message.

Make sure to leave the merge code **:question_title:** as this will populate with the question title you are matching against.

Translate: Verify Match Error

Translation:

This input needs to match: :question_title.

Compatible Questions

This feature is available for the following textbox-style question types that are *not* part of a Custom Group, Contact Form, or Custom Table:

- Textbox (including textboxes with answer format validation)
- Email
- Percent
- Date
