

Edit All Reporting Values

Getting your survey data to output the way you need is an important step in the post-collection, data-preparation phase of a survey. Alchemer's [Reporting Values](#) allow you to customize your data output and expand your data analysis options (e.g., [view statistics in the Standard Report](#)).

Reporting Values & Aliases

Sort By

#	Question	Alias	Method	Options	Values
Q1	How likely are you to recommend our product to friends and family? (Net Promoter Score)	<input type="text" value="Product NPS"/>	n/a	n/a	n/a
Q2	Please rate your level of satisfaction with the purchasing process. (Rating (Likert Scale))	<input type="text" value="Purchase Satisfaction"/>	<input type="text" value="Custom"/>	Very Dissatisfied Dissatisfied Neutral Satisfied Very Satisfied	<input type="text" value="Very Dissatisfied"/> <input type="text" value="Dissatisfied"/> <input type="text" value="Neutral"/> <input type="text" value="Satisfied"/> <input type="text" value="Very Satisfied"/>

Reporting Values are often customized when building survey questions. If you didn't customize Reporting Values while building your questions, it can be tedious to go back and edit Reporting Values question by question. Fortunately, you can edit your Reporting Values in one place to prep your data for reports and exports.

Best Practice Tip: When to edit reporting values

Editing Reporting Values affects how your data is presented in your Reports and Exports. If you need to edit reporting values in a live survey, we recommended that you wait until all data collection is finished.

Access Reporting Values Editor

To access the Reporting Values editor, go to **Results > Edit Reporting Values & Aliases**. *Learn more about editing Question Aliases in our [Edit Question Aliases Tutorial](#).*

Here, you will see all of your survey questions sorted according to question number (#) by default. The following columns are included:

- **# (Question Number)** - The number of the question (as seen on the **Build** tab). This column will be blank for any questions where numbering has been skipped/excluded.
- **Question** - The question title along with the question type in parentheses.
- **Alias** - The question Alias or short name. *Note that this value can also be [edited in bulk](#).*
- **Method** - There are three Reporting Value methods:

- **Auto** (default) - will use the text in the answer option that displays to your respondents as the Reporting Value
- **Sequential** - will use numeric values, starting with 1, as the Reporting Value
- **Custom** - lets you make the Reporting Value whatever you like
- **Options** - The question answer options as entered on the Build tab. This is what your survey respondents see.
- **Values** - The current Reporting Values of the question.

Note: The Reporting Values & Aliases editor shows 20 questions per page. You can navigate to additional pages via the toolbar at the bottom of the list.

#	Question	Alias	Method	Options	Values
Q1	How likely are you to recommend our product to friends and family? (Net Promoter Score)	<input type="text"/>	Auto	----	----
Q2	Please rate your level of satisfaction with the purchasing process. (Rating (Likert Scale))	<input type="text"/>	Auto	Very Dissatisfied Dissatisfied Neutral Satisfied Very Satisfied	Very Dissatisfied Dissatisfied Neutral Satisfied Very Satisfied

Edit Reporting Values Individually

There are a couple of options for editing your Reporting Values. In this section, we will discuss the process of editing Reporting Values individually using the **Values** column.

1. To edit a question's Reporting Values, click into a field within the **Values** column.
2. Delete or highlight the existing value, and input the new value. *Note that as soon as you make any change to the field, the **Method** column will be updated from Auto to Custom (unless you have already updated the method).*

Q2	Please rate your level of satisfaction with the purchasing process. (Rating (Likert Scale))	<input type="text"/>	Auto	Very Dissatisfied Dissatisfied Neutral Satisfied Very Satisfied	Very Dissatisfied Dissatisfied Neutral Satisfied Very Satisfied
----	---	----------------------	------	---	---

3. Use the **tab** key on your keyboard (or click into the next field) to proceed to the next field.
4. Rinse and repeat!

Edit Reporting Values using the method dropdown

The **Method** dropdown allows you to quickly specify **Sequential** reporting values. You can also use the method dropdown to quickly change your reporting values back to use the text in the answer option that displays to your respondents.

1. To update the Reporting Value method for a given question, find the question in the list and click the dropdown menu in the **Method** column.
2. Choose your desired method. There are three Reporting Value methods:
 - **Auto** (default) - will use the text in the answer option that displays to your respondents as the Reporting Value
 - **Sequential** - will use numeric values, starting with 1, as the Reporting Value
 - **Custom** - lets you make the Reporting Value whatever you like

The screenshot shows a configuration interface for a question titled 'Q2: Please rate your level of satisfaction with the purchasing process. (Rating (Likert Scale))'. The interface includes a 'Method' dropdown menu currently set to 'Custom', and a list of five response options: 'Very Dissatisfied', 'Dissatisfied', 'Neutral', 'Satisfied', and 'Very Satisfied'. Each option has a corresponding input field for its reporting value, with '1' entered for 'Very Dissatisfied'.

3. Depending on your current method, you may or may not see all of the question's Reporting Values update. Anytime you change the method to **Custom**, you will need to define each Reporting Value individually. Changing the method to **Auto** or **Sequential** will update all Reporting Values.
4. Use the **tab** key on your keyboard (or click into the next field) to navigate to the next dropdown menu.

Search Reporting Values & Aliases Page

The **Search** bar found on the **Reporting Values & Aliases** allows you to easily find the questions and options. The following are available as search criteria:

- **Question Number** - search for *Q+#* to return the exact question, for example, *Q1*.
- **SKU/ID** - search for a question using its **Question ID** number. Use only the number in the search field.
- **Question Type** - search for a specific type of question to return all questions of that type. For example, searching for "Radio Buttons" will return all individual radio button questions in your survey.
- **Question Title** - search for a question by its title. Use the entire title or a portion. This search matches on keywords.

- **Question Alias** - search for a question by its Question Alias. This search matches on keywords.
- **Answer Option** - search for answer options contained within a question or questions. This search matches on keywords.
- **Reporting Value** - search for Reporting Values within a question or questions. This search matches on keywords.

Sort Reporting Values & Aliases Columns

All columns on the **Reporting Values & Aliases** page can be sorted. Click on the column header or use the **Sort By** menu to change the sorting from the default.

#	Question	Alias	Method	Options	Values
Q1	How likely are you to recommend our product to friends and family? (Net Promoter Score)	<input type="text"/>	Auto	----	----
Q2	Please rate your level of satisfaction with the purchasing process. (Rating (Likert Scale))	<input type="text"/>	Auto	Very Dissatisfied Dissatisfied Neutral Satisfied Very Satisfied	Very Dissatisfied Dissatisfied Neutral Satisfied Very Satisfied

The following sorting options are available:

- **#** - the page is sorted according to question number by default (ascending from 1). Click on the **#** to sort in descending order.
- **Question** - sort by question title alphabetically, based on the first letter in the title (a → z *or* z → a).
- **Alias** - sort by question alias alphabetically, based on the first letter in the title (a → z *or* z → a).
- **Method** - sort by Reporting Value method (Auto, Custom, Sequential) alphabetically (Auto → Custom → Sequential *or* Sequential → Custom → Auto).
- **Option** - sort by the *number* of answer options in a question (least to greatest *or* greatest to least).

Compatibility

Certain question types do not provide the option for editing or customizing Reporting Values.

When this is the case, the field in the **Values** column will not be editable. The field will be grayed out and will contain **n/a**.

#	Question	Alias	Method	Options	Values
Q1	What is your name? (Textbox)	<input type="text"/>	n/a	n/a	n/a

Reporting Values cannot be customized for the following question types:

- Textbox
- Essay / Long Answer
- Email
- Date
- Slider
- Net Promoter Score® (NPS)
- File Upload
- Number
- Percent
- Signature
- Continuous Sum
- Questions with Option Piped answer options

For Rows of Grid and List question types (including Card Sort Question Types) reporting values are customized for the overall grid question rather than the individual rows.

Q3 Please rate your satisfaction with the following (Radio Button Grid)

Overall grid question

Row (subquestions) of a Radio Button Grid

Phone Support: Phone Satisfaction n/a n/a

Email Support: Email Satisfaction n/a n/a

Live Chat: Chat Satisfaction n/a n/a

Social Media: Social Media Satisfaction n/a n/a

Very Dissatisfied

Dissatisfied

Neutral

Satisfied

Very Satisfied

N/A

Reporting Values in Reports & Exports

Reports

Depending on the report type, you may see Answer Options or Reporting Values by default. You have several [options for customizing what is displayed](#).

Exports

When you export your raw data to a [CSV/Excel](#) file, it will always show your reporting values.

If you're exporting to [SPSS](#) you must have numeric reporting values for all questions other than open text fields. If you did not specify numeric reporting values our system will auto assign them

using the option SKUs. *An option SKU is a 5-digit number assigned to each answer option.*

FAQ

Why can't I change the Reporting Values for some of my questions?

Reporting Values cannot be customized for all questions types. Review the above [Compatibility list](#) for more information.
