

Why aren't the names, email addresses, and other contact info I collected in my survey displaying in my shared report?

Looking for the names, email addresses and other contact information you collected in your survey to display in your shared report?

Contact information (collected via either the [Contact Form](#) or [Email](#) question types) is only available for display when using either the **Password Protected** or **Only Logged-in Alchemer Users Privacy Settings**. This way you don't mistakenly share your survey respondent's info with the world!

Who can see this report

- Anyone with the link**
