

Filter Individual Questions in Your Report

In addition to filtering your entire report based on a condition, you now have the ability to apply a filter to a single report element within a [Standard Report](#) or a Legacy Summary Report.

Standard Report Setup

1. To apply a filter rule to an individual Standard Report Element, click the **Filter** option associated with the element you wish to filter.

2. Next, create your filter rule using the logic builder. Click **Save** when finished.

+ Add Group

3. If you wish to display the details of your filter condition in the body of the report, select the **Show Details of Filter with Report Element** checkbox below your condition(s). This will result in a filter description directly below the element title in the body of the report.

Filter by Campaign

If you are using [multiple share methods to distribute your survey](#), you can now filter your individual report elements based on the share method.

1. To filter a specific element based on the share method (Standard Report), click the **Filter** option associated with the element you wish to filter.
2. Click to expand the **Filter by Survey Link or Campaign** section and choose the link/share method that you want to include in the question's dataset.
