

Alchemer Release Notes: May 26th, 2021

Below is this week's log of fixes and improvements:

Improvements

[Performance] – Removed the 6-hour wait between SMS send operations. Users can now update and send an SMS campaign if all contacts from the previous send are at least queued.

[Performance] – Enforce secure HTTPS links for surveys where that option has been selected. Previously users could manually bypass the HTTPS connection through insecure HTTP links, bypassing data encryption for their session.

Fixes

[Performance] – Ensure that the “Allow Date Filtering” option on Share Report persists across a browser refresh. Previously, if the user had selected the option, saved it, and then refreshed the browser page, the option would show up as unselected.

[Performance] – Break the unintended link between the “Show Social Sharing Buttons” and “Allow Exports” options in the Share Report screen. These two options had become linked such that manipulating one would also cause the other to change in the same manner.

[Performance] – Fix SMTP integration so users are allowed to update their password without having to remove and re-add the integration, resulting in a better user experience.
