

# Password Protect Shared Reports

Report builders can add Password Protection to Shared Reports to add another layer of security for their data. To add Password Protection to a report, select Password Protected from the **Who can see this report** dropdown menu. This will prompt you to create a password needed to access the report.

## Require all Shared Reports in your account to be Password Protected

Account Administrators can require all shared reports in the account to be Password Protected or only accessible to logged-in Alchemer users. To set this up go to **Security > Settings**. Select the checkbox next to Require Password Protection.

## Share Report Settings

Password Protect Report Share Links

Require all share link reports within the account to be password protected or only accessible for logged-in users.

Note: This change will impact all shared reports that are created going forward and will not impact previously shared reports. Additionally, reports will no longer be indexed by search engines.

Adding this setting will only impact future shared reports, and will not impact previously shared reports. Reports will no longer be indexed by search engines.

When an Account Administrator has made this the default setting on the account, report builders will only see the option to share reports that are Password Protected or only accessible to logged-in Alchemer users.
