

Alchemer Survey Snowflake Integration

The Alchemer Snowflake Integration is available as an add-on. If you are interested in purchasing the Snowflake Integration, please [contact us](#) for additional information.

At a high-level, Alchemer's integration with Snowflake allows you to easily:

- Push survey data from Alchemer into a Snowflake table.

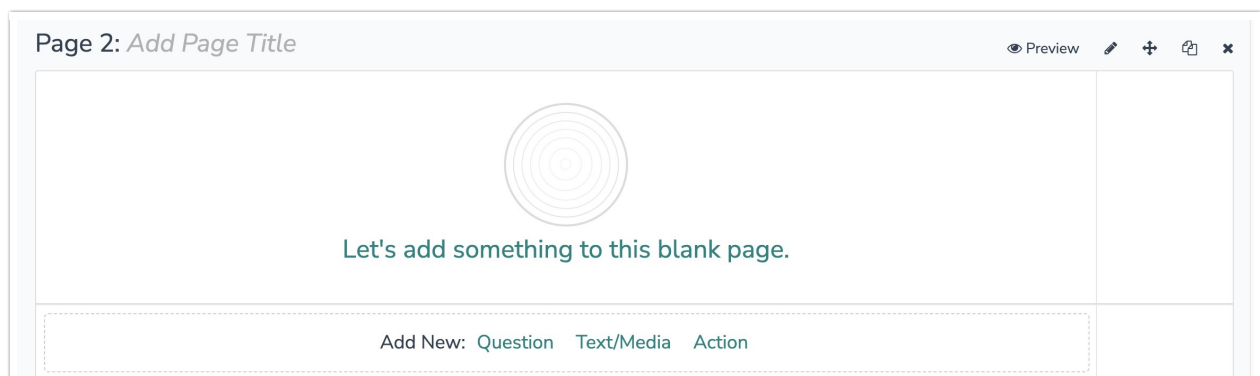

Easily push your Alchemer feedback data into Snowflake data warehouse, to combine the feedback with your other data and make it easily accessible to business users.

Integration Setup

Adding an Integration Action

1. Select an existing survey or create a new survey. Then navigate to the Survey Builder.
2. Click "Add New: Action"

You cannot add this Integration Action to the first page of the survey.

3. In the Add Action modal, scroll down to Integrations. Then click "Add" for one of your purchased integrations.

If you haven't purchased any additional integrations, you will see the below screen:

4. Select the action you would like to perform. You can:

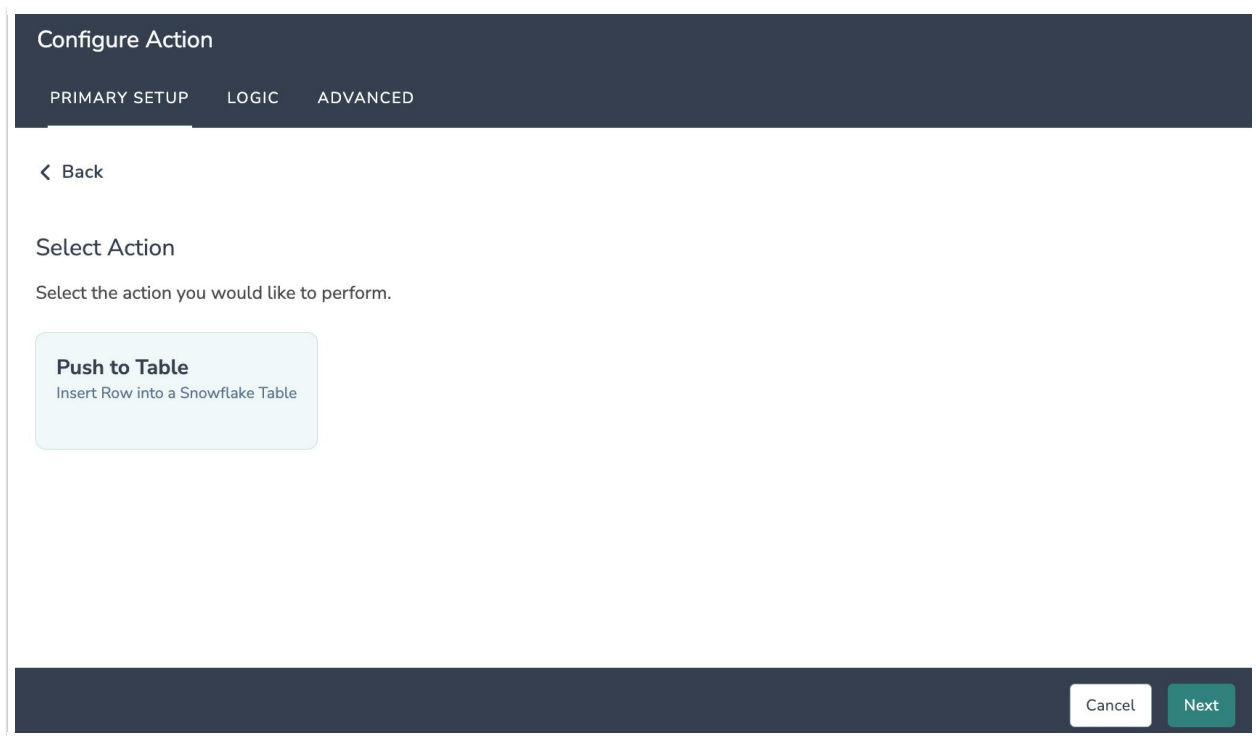

- **Push to Table:** Insert a row of new data from an Alchemer Survey into a Snowflake table.

Snowflake | Push to Table

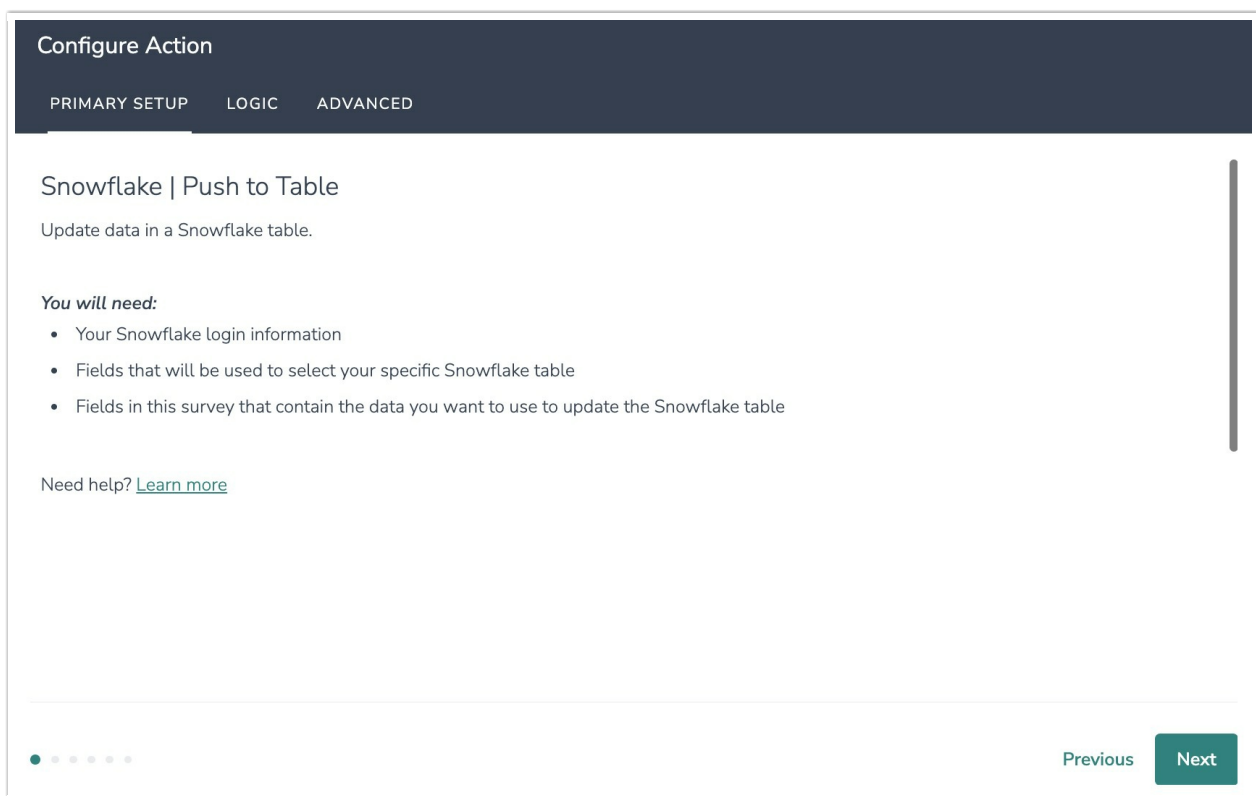

Before configuring this integration action, you will need:

- Your Snowflake login information
- Fields that will be used to select your specific Snowflake table
- Fields in this survey that contain the data you want to use to update the Snowflake table

1. Select "Push to Table".

2. Hit next on the integration overview screen.

3. Connect to your Snowflake account. Click new authentication and provide the required fields.

- Password
- Warehouse
- Database
- Schema

Fields that not required

- Role
- Access URL

If you need clarity on what the field is and why the integration requires it, hover over the question mark icon in the right corner of every field.

The screenshot shows the 'Configure Action' interface for Snowflake authentication. The main window is titled 'Snowflake | Authentication' and includes tabs for 'PRIMARY SETUP', 'LOGIC', and 'ADVANCED'. Below the tabs, there is a 'Snowflake account' section with a 'Cody's Snowflake' account listed. A modal window titled 'Create a new authentication' is open, displaying several input fields. A red box highlights the 'Account*', 'Username*', and 'Password*' fields, with a red arrow pointing to a callout box that says 'The fields within the red box are all required.' The other fields shown are 'Warehouse', 'Database', 'Schema', 'Role', and 'Access URL'. Each field has a 'No value' placeholder and a question mark icon in the top right corner. At the bottom of the modal, there are 'Previous' and 'Create' buttons.

4. In the Table List dropdown, select the table you would like to use.

6. *Optional:* After an integration action occurs, data about the action is available for use in your survey. You can map this data back to fields in Alchemer.

For example, if there is an error in the action you can send yourself an email with the error message via a Send Email action.

Configure Action

PRIMARY SETUP LOGIC ADVANCED

Snowflake | Get data back

You can get data back about the update to use in your survey.
This is optional.

7. Click "Save" to complete setup for the integration action.

Configure Action

PRIMARY SETUP LOGIC ADVANCED

Snowflake | Setup complete

A log of each run result can be found in the Individual Responses > Action Log.

Previous **Save**

Monitor a Snowflake Integration Action

A log of each run result can be found in Results > Individual Responses > Action Log.

Select an individual response and then navigate to the Action Log. In the Action Log you can monitor if the action was successful or not.

FAQs

▸ What permissions do I need within Alchemer to set-up and use the Snowflake integration?

▸ This integration doesn't fit my use cases, or I want to provide feedback to Alchemer!
