

# Integration Runs

Alchemer Connect includes 300,000 Integration Runs per year. Additional Integration Runs are available for purchase. An Integration Run is one execution of a specific integration action in the Survey or Workflow. For example, an Integration Run might include pushing data to an integrated service or pulling data from the integrated service. Some Surveys and/or Workflows may include multiple Integration Runs for a single response when multiple integration actions are configured (e.g. to both pull and push data).
