

AI Highlights Preferences

Alchemer Dashboard is currently waitlist only. [Visit this page](#) to learn more about Dashboard or join the waitlist!

Change your AI Highlights basic preferences. These parameters and threshold settings are a subset of those available on the [AI Highlights Customize analysis](#) dialog. If you set them here, the settings persist for all your AI Highlights analyses, including when you run custom analyses, unless you explicitly reset options for a custom analysis.

Manage AI Highlights preferences

You can set default preferences for all your AI Highlights analyses.

To specify your AI Highlights preferences, follow these steps:

1. Select AI Highlights from the top navigation bar. If you do not see that tab, you do not have AI Highlights privileges; contact your administrator.
2. Select **Default preferences** in the upper-right corner of your screen.
3. Specify data preferences: AI Highlights can exclude null values or measure values of 0 from the analysis. It can also auto-tune the date boundaries.
4. Specify parameters for analysis: You can specify the maximum p-value, minimum and maximum correlation coefficient, maximum correlation lag, and minimum relative difference.
5. Select **Save**.
