Search Underlying Data

> **Alchemer Dashboard is currently waitlist only.** Visit this page to learn more about Dashboard or join the waitlist!
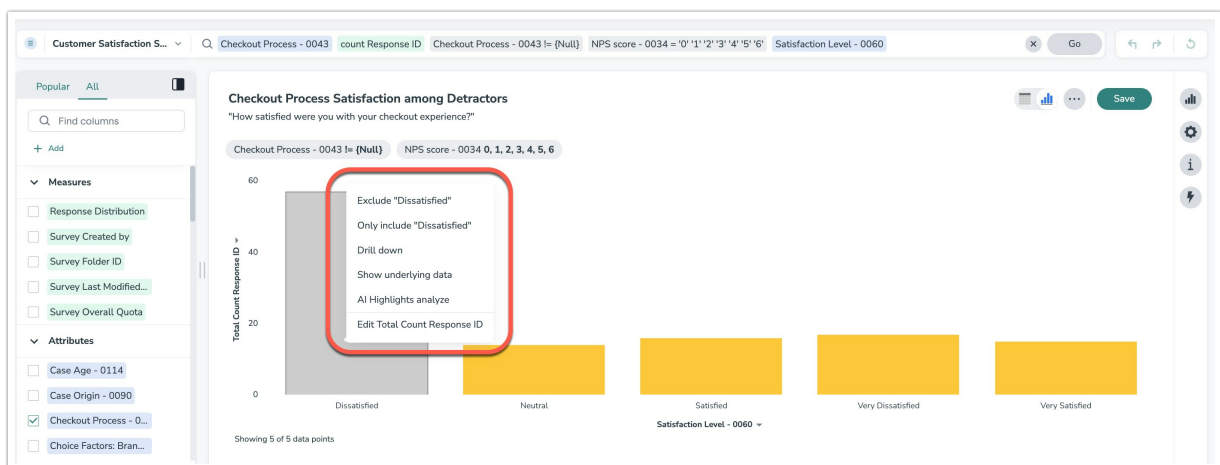

You can see the most granular details of a given result set, that is, it shows the un-aggregated view. This feature lets you understand what an Chart consists of. For example, if you search for `customer region revenue`, the Chart shows the aggregate revenue value for each customer region. Then, you can right-click any row and then select **Show underlying data**, to see each value which constitutes `revenue` for any given region.

Only the first 1,000 rows appear when viewing the underlying data. You can even download the results shown when you choose **Show underlying data** from a chart. The download file limit is a million rows.

> Alchemer Dashboard does not support showing underlying data for searches based on schemas with chasm or fan traps, or for columns based on aggregate formulas.

To show underlying data:

1. Right-click the visualization or table cell of interest.

2. Select **Show underlying data**.

A new window opens that displays a summary and the underlying data.

3. Optionally, choose to **+ edit columns** to add additional data.

4. Select **Confirm Changes**.

5. Select **Download CSV** in the lower-left corner to download a CSV file of the data.
