Line Stacked Column Charts

The line stacked column chart is similar to the line column chart, except that it divides its columns with an attribute in the legend. The line stacked column chart combines stacked column and line charts. There are two y-axes, one for each measure.
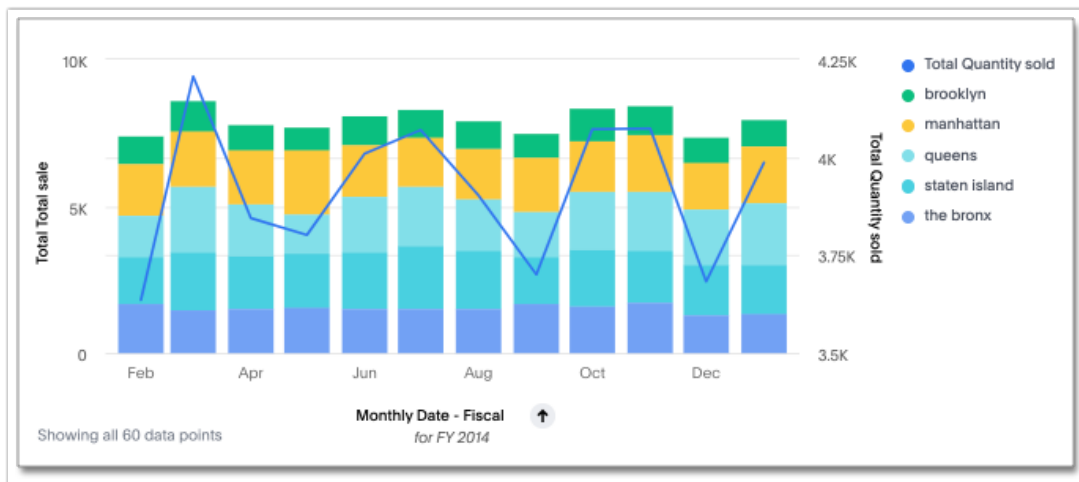

You can enable shared y-axes for the two measures. To enable shared y-axes, select the dropdown menu icon next to one of the y-axis labels, choose **Group**, and select the unchecked measure.
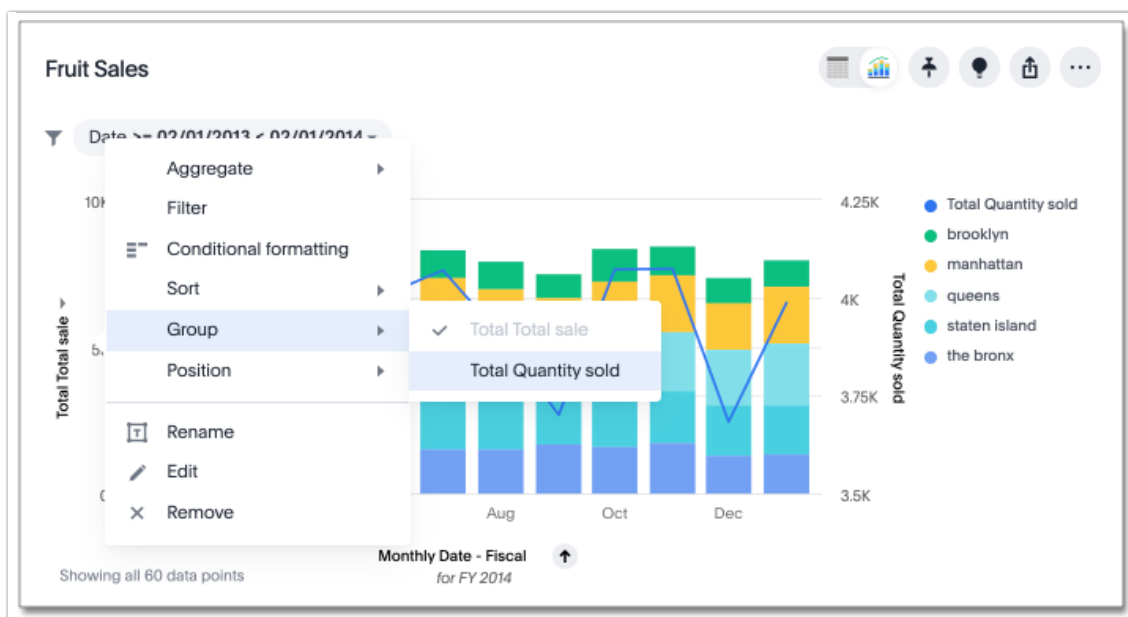

Limitations

- Top or bottom keyword results are not accurate.
- Filter aggregated columns, or columns with aggregated formulas cannot be filtered.
- Cumulative functions are not supported.
- Moving functions is not supported.
