Set the Y-Axis

> Alchemer Dashboard is currently waitlist only. **Visit this page** to learn more about Dashboard or join the waitlist!

You can manually set the y-axis range by selecting **edit** from the y-axis label dropdown menu, or from the chart configuration menu.

Setting the y-axis range from the axis label

To set the y-axis range:

1. While viewing your Chart as a chart, open the dropdown menu icon next to the y-axis label you want to change.
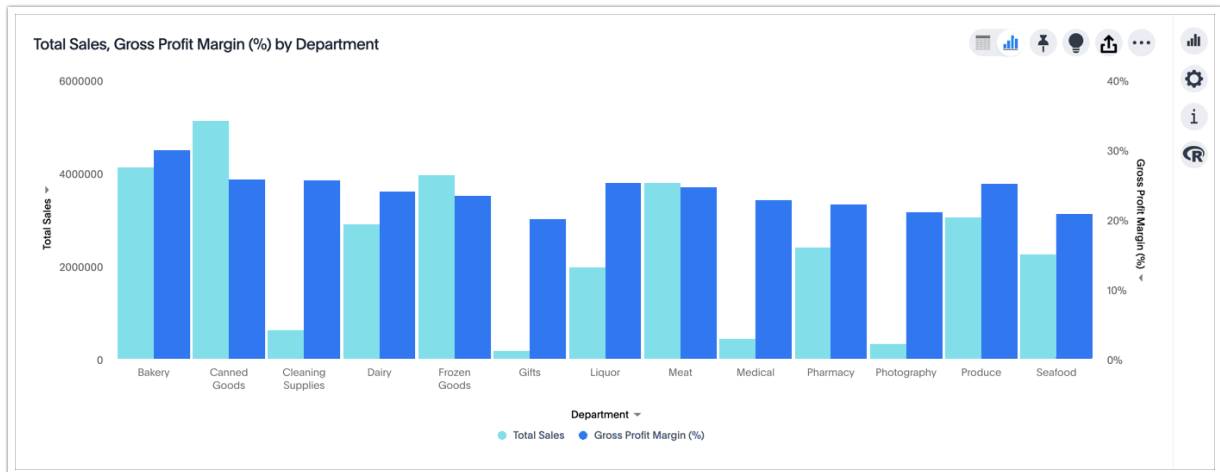

2. Select **edit**.

3. Under **Min** and **Max**, set the y-axis range by specifying start and end values.

In this example, the original chart shows **sales** values by **department** from 0 to over $5M. We can enter a y-axis range of 2500000 to 5000000 to show only sales between $2.5M and $5M.

The chart reorganizes itself to reflect the new y-axis range.

To change the range for **gross profit margin**, open the dropdown menu icon next to the **gross profit margin** axis label.
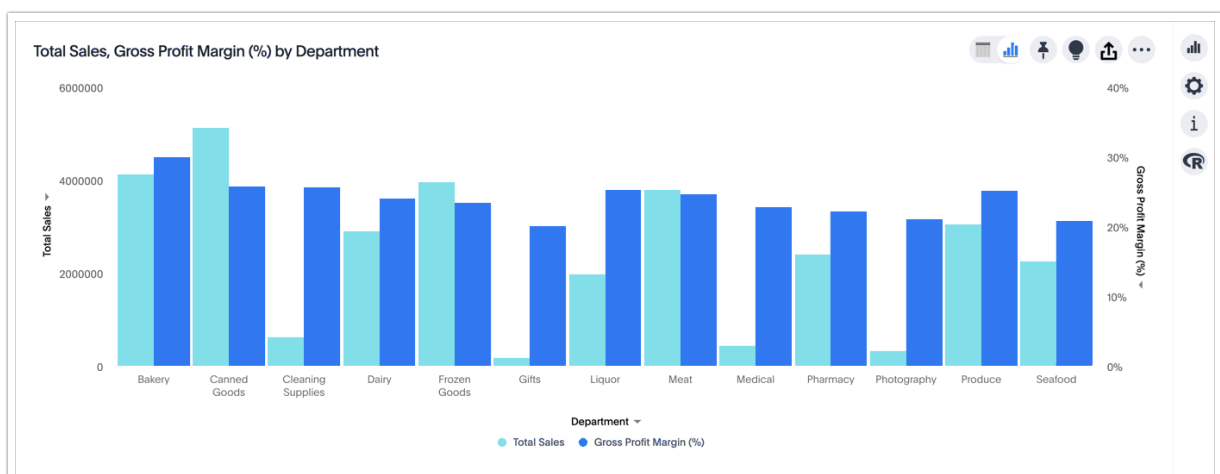

Setting the y-axis range from the chart configuration menu

To set the y-axis range:

1. While viewing your Chart as a chart, select the **chart configuration** icon on the upper right.

2. Select the **edit** button that appears when you hover over **y-axis**.

3. If you have multiple measures on the y-axis, select the measure you want to set the range for.

4. Under **Min** and **Max**, set the y-axis range by specifying start and end values.

In this example, the original chart shows **sales** values by **department** from 0 to over $5M. We can enter a y-axis range of 2500000 to 5000000 to show only sales between $2.5M and $5M.

The chart reorganizes itself to reflect the new y-axis range.
