Show Data Labels

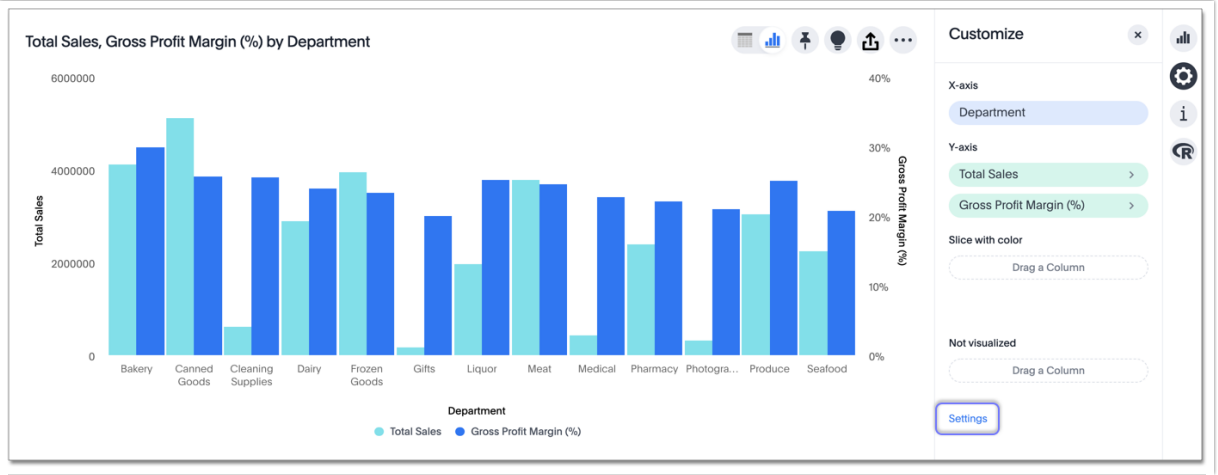
> **Alchemer Dashboard is currently waitlist only.** Visit this page **to learn more about Dashboard or join the waitlist!**

You can show data labels for every measure in your chart, or configure labels separately for each measure.

Configure all data labels

1. While viewing your search or Chart as a chart, select the **chart configuration** icon on the upper right.

2. Select **Settings** on the lower right.



3. Select the **All labels** checkbox.

To further configure the labels, by showing un-rounded numbers for example, configure labels individually.

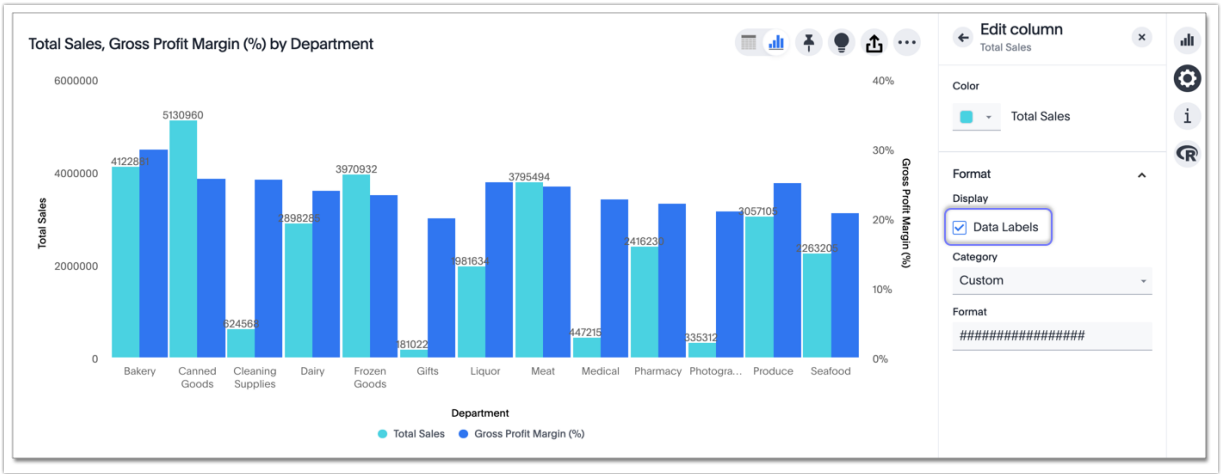
Configure labels for one measure

1. While viewing your search or Chart as a chart, select the **chart configuration** icon on the upper right.

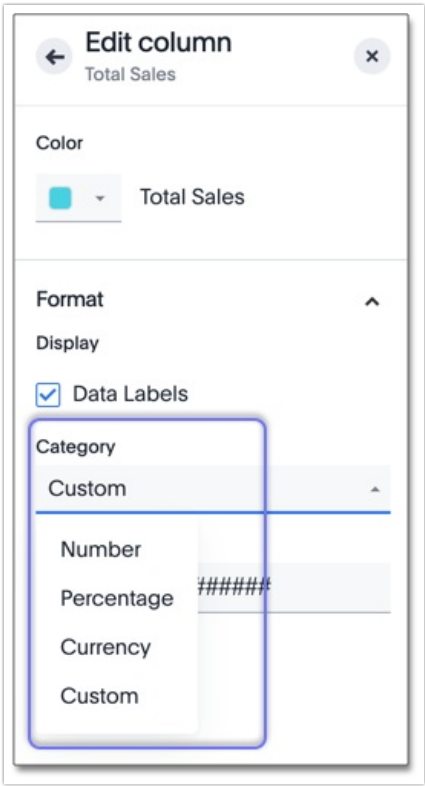
2. Select the measure you want to add labels to.

3. Select the **Data Labels** checkbox.

Note that only the **Total Sales** data has labels.



4. You can specify a **category**, like *number*, *percentage*, or *currency*. Otherwise, Alchemer Dashboard automatically picks the best category for your data.



5. When you specify a category, you can also specify **units**. Select *none* to see your data down to two decimal points, for example, or select *millions* to see labels rounded to the millions.

You can also specify the number of decimal places.
