

Alchemer Release Notes: December 2025

Alchemer Release Notes – December 2025

We're excited to share the latest improvements across **Alchemer Survey** and **Alchemer Workflow**. These updates focus on better performance, more reliable exports, and smoother everyday workflows.

Key:

- Enhancement
 - Bug Fix
-

Alchemer Survey

□ Faster, more reliable large contact uploads

Uploading large contact lists to campaigns is now faster and more dependable, with performance issues resolved.

□ Audience list “Last Modified” date is now accurate

The “Last Modified” date now updates correctly whenever you edit contacts or make changes to an audience list.

□ Segment exports now include only the right contacts

When exporting from an audience segment, you'll now receive only the contacts that belong to that specific segment.

□ Recurring exports run more reliably

Recurring exports no longer reset their run count, preventing unexpected stops in scheduled exports.

□ Easier publishing for the Question Library

A new **Publish** button lets you quickly and reliably sync Question Library updates across your surveys.

□ Improved Survey API pagination

The Survey API now reports accurate page counts, preventing blank pages and related errors.

□ Smaller, more efficient API responses

A new `include_unanswered` option lets you exclude unanswered questions, reducing response size and avoiding errors on large surveys.

Alchemer Workflow

☐ Reusable survey invite URLs

You can now reuse survey invite URLs across Workflow steps and integrations using a new merge code.

☐ Corrected survey invite links in exports

Workflow Delivery Statistics exports now use the correct step ID for survey invite links. (This applies to new exports only.)

☐ Workflow exports available in Build & Test

You can now access Workflow exports and reports directly from the **Build** and **Test** tabs, just like in **Monitor**.

☐ Large Workflow exports now complete successfully

Exports for workflows with 200,000+ runs are now processed in chunks, preventing timeouts and blank files.

☐ More accurate SMS delivery reporting

Daily SMS status checks ensure delivery reports stay accurate and up to date.

☐ Improved Enter key behavior in surveys

In one-at-a-time mode, pressing Enter on checkbox questions now advances correctly without skipping questions or causing errors.

☐ These updates are now live across all production environments.
