

# Android 7.0 Release Notes For Alchemer Mobile

Please view our latest release notes below for the Alchemer Mobile Android SDK.

---

## Releases

### Version 7.0.0

*Released February 26, 2026*

This release introduces a modernized Android SDK with major accessibility improvements, enhanced stability, and updated platform requirements to align with Google's latest standards.

---

### Major changes

- **Minimum supported Android version is now Android 7.0 (API level 24)**  
Devices running below API level 24 are no longer supported by the SDK.
  - **Minimum supported compile SDK version is now 35**  
This update aligns with Google's latest Play Store requirements.
  - **EU region support added**  
You can now specify the data region during SDK registration using the `region` field.
    - Default region: US
    - Optional region: EU
- 

### Improvements and new features

- **Android 16 full screen mode support**  
Digital interactions now fully support Android 16's full screen experience.
- **Major accessibility improvements**
  - Improved screen reader compatibility
  - Keyboard navigation fixes
  - Enhanced contrast and labeling across interactions
- **Improved SDK stability**
  - Fewer crashes across common interaction flows

- Faster and more reliable loading of in-app interactions
  - **Modernized activity handling**
    - A new activity registration model improves flexibility and reliability when displaying interactions across your app.
- 

## Fixes

- Improved reliability of interaction rendering across supported devices
- Reduced edge-case failures during interaction evaluation and display
