

Google Sheets Authentication

Overview

The Alchemer Google Sheets integration uses OAuth to authenticate.

Google Sheets API Credentials

What You Need

- Google Sheets login credentials

Authenticate Google Sheets in Alchemer

How to Authenticate

Your browser does not support HTML5 video.

1. Start a New Authentication

- Inside any Google Sheets integration action, select **New Authentication**.

2. Enter Your Google Sheets Credentials

- A pop-out window will appear asking for your Google Sheets login credentials or to select a profile and input your credentials. Enter them.
 - **Note:** If the pop-out appears, then disappears, and the authentication is made, that means you were already logged into a Google account. If you want a different account, you can make a new authentication, just ensure you are logged out of Google in your browser.

3. Once you enter your credentials, your authentication will be created and you are good to go!
