

Brevo Authentication

Overview

The Alchemer Brevo integration uses an API key to authenticate. Brevo (formerly Sendinblue) is an email and messaging platform for marketing and transactional communications.

Brevo API Credentials

What You Need

- A Brevo account
- A Brevo API key (found in your Brevo dashboard under **Account** → **SMTP & API** → **API Keys**)

Authenticate Brevo in Alchemer

How to Authenticate

1. Locate Your Brevo API Key

- Log in to your [Brevo account](#).
- Navigate to **Account** → **SMTP & API** → **API Keys**.
- Copy an existing API key or click **Generate a new API key** to create one.

2. Start a New Authentication

- Inside any Brevo integration action in Alchemer, select **New Authentication**.

3. Enter Your API Key

- In the authentication dialog, paste your Brevo API key into the provided field.
- Give the authentication a recognizable name so you can reuse it across actions.

4. Save and Confirm

- Click **Save**. Your Brevo authentication is now ready to use in any Brevo workflow action.
- **Note:** You can create multiple authentications if you work with more than one Brevo account or API key.
